## Legal Disclaimer

Please read the following notice carefully before proceeding to read this Whitepaper document issued by TRON-Europe Limited, an exempted company incorporated and existing under the laws of Germany. This notice applies to all people who read this document. Please note this notice may be altered or updated.

This Whitepaper is for information purposes only. The contents of this Whitepaper are not a financial promotion. This document provides information and certain statements to potential investors and enable them to decide whether to investigate thoroughly in this opportunity of acquiring TRONEuropeRewardCoin (TERC). Therefore, none of the contents of this Whitepaper serves as an invitation or inducement to engage in any sort of investment activity.

Prospective acquirers of TERC tokens should carefully consider and evaluate all risks and uncertainties associated with the cryptocurrencies, TRON-Europe Ltd and their respective businesses and operation and the TERC tokens. Familiarize yourself with all the information set out in this Whitepaper. Ensure that you are aware of all of the would be risks prior to obtaining TERC.

## Abstract

This document provides information regarding the TRON-Europe project and TERC, the token that empowers the operations of TRON-Europe. The main goal of this project is to promote the TRON network in Europe and boost the value of TRON (TRX) by building decentralized and independent infrastructure that will be used as the foundation of a powerful DApps ecosystem.

TERC tokens will be integrated in this ecosystem that we try to build. The specifications and the uniqueness of TERC grants to the users, considerable advantages over the users that purchases other tokens for their operations around the TRON network.

As a TRON (TRC10) token, TERC utilizes and inherits all the technological benefits that the TRON blockchain has obtained so far. It is already listed in some exchanges and it is planned to be listed in many more in the future.

Additionally, TERC holders will reap the benefits of the tokens not only from using them in the DApps ecosystem, but also by storing them in their wallets, due to its limited circulation supply as it is distributed only as a voting reward.

## Introduction

TRON network is evolving rapidly since the day it first started however, there are still opportunities for further enhancements in the ecosystem. Additionally, the development of DApps has started to grow and applications that are going to push the mass adoption of cryptocurrencies need to be taken to the next level.

TRON-Europe aims to play a crucial role in this ecosystem by promoting TRON blockchain and creating a better environment for users, making it easier for them to be involved in DApps with real use case by having the convenience of using TERC for their activities.

## Problem Statement

The blockchain technology of the TRON network can make a positive impact on our economic environment. The technological advances that stem from the blockchain technology have the ability to provide a competitive advantage to the organizations that adopt decentralized systems in their operations and be one step ahead of their competitors. However, people are not aware of the benefits of this technology and combined with the regulations that exist, they pose a huge barrier towards mass adoption.

Furthermore, many chains have suffered the consequences of regulations that force some critical nodes to shut down. This issue directly affects the efficiency and the reliability of the network as it may decrease the decentralization of the nodes and give prospects to some nodes that concentrate the computing power and control the system.

It is an undeniable fact that there is a need for an actor that will promote the TRON network and will put the biggest efforts to promote and make this ecosystem thrive.

## The Solution

The TRON network provides the greatest potential to this ecosystem to grow due to its high transactions speed and its continuous evolvement. TRON-Europe is dedicated to establishing a better ecosystem for the TRON community, by building a solid ecosystem of DApps, social teams and reliable, independent and decentralized infrastructure that can support the network. All together combined will promote the regular use of TRON in daily transactions, causing an increase in its value.

### Infrastructure

Decentralized infrastructure will keep the system running non-stop and be invulnerable from known and unknown risks that may force it to shut down. Setting up independent nodes in different regions around Europe eliminates the risk that it is discussed above.

The main node is located in Frankfurt, Germany. It is thought to be the best place to install a server because it is the main internet hub in Europe.

The main node consists of:

- 48 core processor of the newest generation
- 256GB RAM
- 2x 10Gb/s internet connection
- 1TB SSD

Our nodes will be running at our own computing center that is completely independent and not hosted by any cloud company. Given that, we own faster nodes than any other virtual nodes that cloud companies provide to their clients.

### Local Teams

Local teams are essential for the promotion of the network, the maintenance of the already establish community and the continuously

improvement of the userbase. Tron-Europe plans to create local communities in every European country in order to maintain the infrastructure, assist in the development of DApps ecosystem and spread the news about the TRON network. Given that, people who are interested in the blockchain technology, TRON network and TRON-Europe project, will have the opportunity to interact and communicate in their own language and help each other. These people will be connected with citizens of the same nationality and establish strong bonds that will ameliorate the development of the community.

## DApps

Decentralized applications (DApps) that have real use case in the everyday life of people can also support the development of the TRON ecosystem. The more the DApps the more the people who will use them along with TRON, leading to an increase in the value and the price of TRX that will eventually evolve the ecosystem.

TRON-Europe will support and reward the development of such DApps and help for the creation of a whole ecosystem on the TRON Blockchain.

## Daily Business

In order to increase the value of TRON, it is significant that this cryptocurrency should be used in daily basis for our every day transactions. TRON-Europe's goal is to establish TRON as a mean of payment, even in huge corporations, and assist them with the integration and the implementation of this payment system. The DApps ecosystem and the local communities that will be created are key factors that will let TRON enter the mass market and convince big companies and entrepreneurs for the usability and the value of TRON.

## TERC Overview

TRONEuropeRewardCoin (TERC) is the token that is going to fuel any of the TRON-Europe operations. It is a TRC10 token with a total supply of 10,000,000,000 that permits user experience flexibility. Due to the fact that TERC is only distributed as a voting reward, its limited circulating supply gives it the possibility of rising in value.

TERC has been integrated into several projects we are working on. Some of them that have already gone public are: CryptoCannabis, ChibiFighters, GameofTrons. In these projects you will be able to use both TERC and TRX. The value of TERC will be 1:1, meaning that 1 TERC = 1 TRX. The token is already traded in some exchanges and it is expected to be listed in many more in the future.

Some of the characteristics that TERC obtains are:

- Holders of TERC will be eligible for several airdrops in the future
- Holding TERC in your wallet will grant you access to zero or reduced fees in coming projects
- TERC is only distributed as Voting Rewards, so the circulating supply will raise slowly
- It is planned to reward holding of TERC like voting in the future
- You will need an amount of TERC in your wallet (Just hodl, no costs) to activate our new DExchange.
